

DECANTER CENTRIFUGES & PLANTS FOR SOLID/LIQUID SEPARATION

ECO-JET WEIR PLATES FOR GREATER ENERGY EFFICIENCY IN THE DECANTER

COST SAVINGS

HILLER has developed a system that helps you to save up to 30% of the energy consumption of your decanter.

With the HILLER ECO-Jet Weir Plates you save cash, plain and simple - within just a short time this investment will have paid for itself. Installing these weir plates does not result in any loss of performance at all.

BENEFITS ECO-JET

- rapid amortisation
- considerable reduction in energy consumption
- problem-free integration into standard HILLER decanters
- can be used in different applications
- quick and simple installation
- no power loss in the system

ECO-JET WEIR PLATE

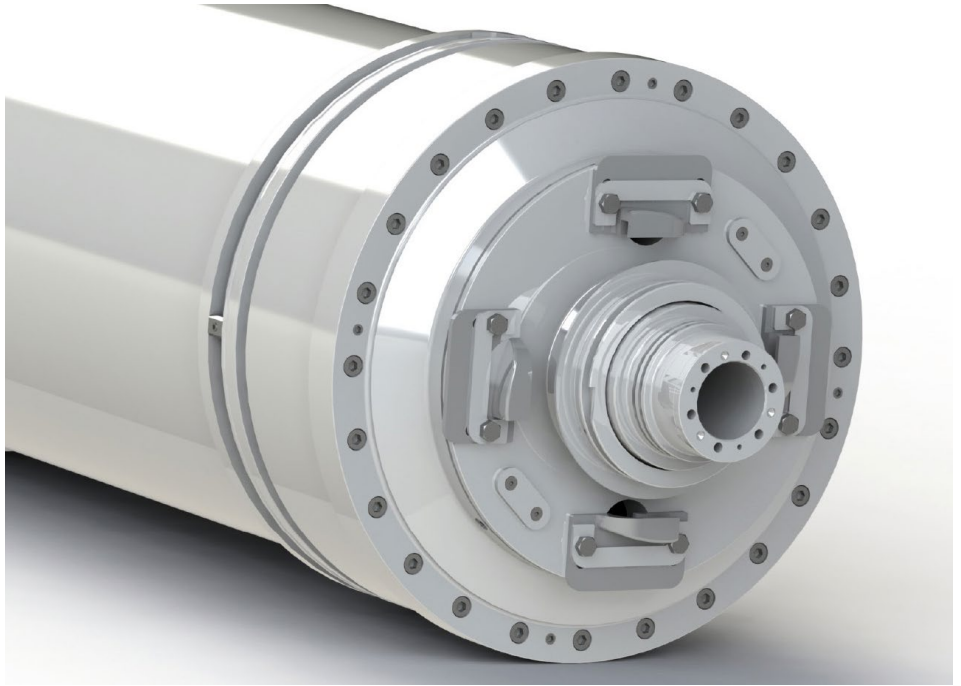

INSTALLED ECO-JET WEIR PLATES

HILLER ECO-Jet Weir Plates are shaped to provide targeted deflection of escaping centrate water and pass the energy saved directly back to the main drive. In the process, the main drive consumes up to 30% less drive energy - the level of potential savings depends on the throughput and the decanter size.

HILLER ECO-Jet Weir Plates can be installed in standard HILLER decanters at minimal cost.

The optimisation makes financial sense and protects the environment.

POTENTIAL SAVINGS

We would be delighted to calculate the savings you could achieve with your system, and the amortisation period for your process!

This calculation is of course free of charge and non-binding for you. Please get in touch with us.
