ESSENTIAL PACKAGES FOR A SUCCESSFUL DECANTER LIFE

MAXIMUM RELIABILITY

All over the world, HILLER decanters are performing their duties with the utmost reliability. The requirements of our customers in terms of operational reliability and availability of the machinery and system technology used are increasing continually.

Simply by purchasing a new HILLER decanter, our customers are selecting a comprehensive **ESSENTIAL SERVICING CONCEPT** that guarantees professional care for your decanter and systems for the entire life cycle of the equipment.

NO STANDSTILL TIME

The HILLER decanter is often at the centre of a highly integrated production facility and a standstill would have a serious impact on the operating result. A lack of machine redundancy can also intensify the problem. This situation is an extremely delicate one, particularly in the context of 24/7 operation, seasonal operation or when dealing with products with a short shelf-life.

BCS SPARE PARTS CONCEPT

To ensure maximum operational reliability for our customers, HILLER has developed the **BCS SPARE PARTS CONCEPT** and has successfully implemented this for many delighted customers. BCS here stands for the modular levels of the Basic, Comfort and Safety spare parts packages. Every level includes a carefully compiled spare parts package including

comprehensive text and image documentation for all HILLER units supplied.

The choice of packages required is made by the customer. Every additional module increases the operational reliability of the customer's system by another level up to the maximum.

We would be happy to provide you with a tailored BCS spare parts quotation in line with your personal requirements.

HILLER STAFF SERVICES

COMMISSIONING

Commissioning with our own HILLER specialist personnel
